

# Vision 1: Repairing Nearsightedness (Myopia)

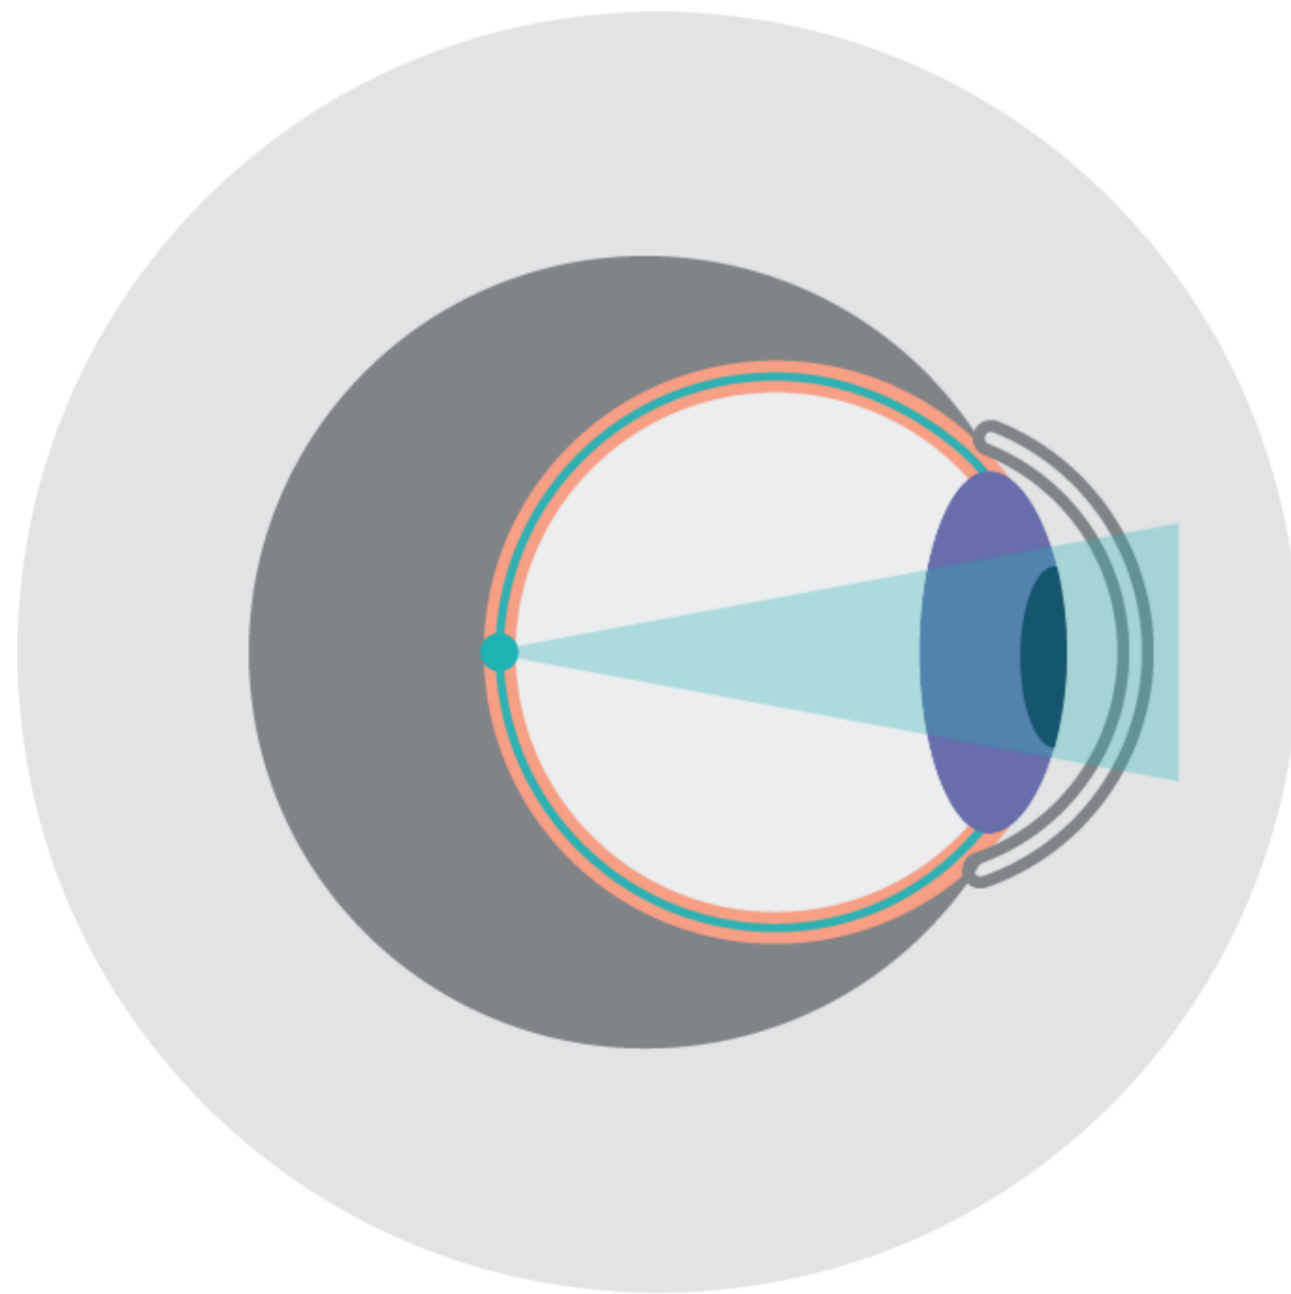

Myopia is a fairly common issue where the curve of the eyes' cornea or lens creates a shortened refraction of light landing in front of the retina on the back of the eye making distant images appear blurry. The faulty projection creates a skewed translation of information to the brain. This Medigraytion guides you into your eyes to direct energy to release tension in your eye muscles and reshape the curve of your cornea and lens, thereby supporting the perfect refraction. The Medigraytion also helps clean and clear the optic nerves.
